IMTSquare Company – AnyChange Project	
Test Cases	Date: 04/06/2023

Test Cases: UC-1: Register to System

Test Case 1: Register to System test

Description:

The objective of this test is to verify that the user can register to the AnyChange platform. Registration process is the main scope of the test together with the main success scenario and extensions (see Use Cases and Use Case Model document).

Pre-conditions:

1. System should be available with the register screen.
2. Users should have valid email addresses.

Post-conditions:

1. Registration process is completed successfully and the system saves the new account correctly.
2. Extension scenarios (validation invalid, confirmation rejection/not entering confirmation password) are handled correctly.

Data required:

1. Username of the user
2. Password of the user

IMTSquare Company – AnyChange Project	
Test Cases	Date: 04/06/2023

Test Cases: UC-2: Login to System

Test Case 2: Login to System test

Description:

The objective of this test is to verify that the user can login to the AnyChange platform. Login process is the main scope of the test together with the main success scenario and extensions (see Use Cases and Use Case Model document).

Pre-conditions:

1. System should be available with the login screen.
2. Users should have been registered.

Post-conditions:

1. Login process is completed successfully, and the system access is given to the user per their registration type.
2. Extension scenarios (system failure, password forgotten, invalid username and password) are handled correctly.

Data required:

1. Username of the user
2. Password of the user

IMTSquare Company – AnyChange Project	
Test Cases	Date: 04/06/2023

Test Cases: UC-3: Manage Personal Information

Test Case 3: Manage personal information test

Description:

The objective of this test is to verify that the user can manage personal information in the AnyChange platform. Displaying and editing the relevant information is the main scope of the test together with the main success scenario and extensions (see Use Cases and Use Case Model document).

Pre-conditions:

1. System should be available and the user must be logged in with the appropriate username and password.
2. Personal information page is loaded successfully.

Post-conditions:

1. User can edit and configure relevant name, surname, address, phone no, and password fields.
2. Extension scenarios (system failure, password change, exception handling per input values) are handled correctly.

Data required:

1. Password of the user, for checking password can be changed.

IMTSquare Company – AnyChange Project	
Test Cases	Date: 04/06/2023

Test Cases: UC-4: Manage Payment Information

Test Case 4: Manage payment information test

Description:

The objective of this test is to verify that the user can manage payment information in the AnyChange platform. Displaying and editing the relevant information is the main scope of the test together with the main success scenario and extensions (see Use Cases and Use Case Model document).

Pre-conditions:

1. System should be available and the user must be logged in with the appropriate username and password.
2. Payment information page is loaded successfully.

Post-conditions:

1. User can add a new credit card that is not registered previously.
2. Extension scenarios (system failure, removing credit cards, exception handling per input values) are handled correctly.

Data required:

1. Credit card information of the user.

IMTSquare Company – AnyChange Project	
Test Cases	Date: 04/06/2023

Test Cases: UC-5: Manage Account

Test Case 5: Manage account test

Description:

The objective of this test is to verify that the user can manage his/her account in the AnyChange platform. Changing the account type or removing the account is the main scope of the test together with the main success scenario and extensions (see Use Cases and Use Case Model document).

Pre-conditions:

1. System should be available and the user must be logged in with the appropriate username and password.
2. Account information page is loaded successfully.

Post-conditions:

1. User can edit and configure the account type.
2. Extension scenarios (system failure, account removal, no registered card, no valid payment) are handled correctly.

Data required:

1. Validity information for the registered credit card, for checking the connected Banking System can process the registered credit card.

IMTSquare Company – AnyChange Project	
Test Cases	Date: 04/06/2023

Test Cases: UC-6: Monitor Products

Test Case 6: Monitor Products test

Description:

The objective of this test is to verify that the user can monitor products. Product monitoring is the main scope of the test together with the main success scenario and extensions (see Use Cases and Use Case Model document).

Pre-conditions:

1. System should be available and the user must be logged in with the appropriate username and password.
2. Registered product list is loaded and the relevant connection between the software and the scraped platform is valid specifically for the product of interest.

Post-conditions:

1. AnyChange connects to the relevant platform and price and relevant information is monitored successfully.
2. Extension scenarios (system failure, connection failure, adding products to the list, removing products from the list) are handled correctly.

Data required:

1. Relevant price and information for the product of interest, for checking the correct price and information about the product.

IMTSquare Company – AnyChange Project	
Test Cases	Date: 04/06/2023

Test Cases: UC-7: Manage Notifications

Test Case 7: Manage notifications test

Description:

The objective of this test is to verify that users can manage notification settings in the system. Within the scope of this test, main success scenario and extension scenarios will be tested.

Pre-conditions:

1. System should be available and the user must be logged in with the appropriate username and password.
2. User logs the system and notification configuration page is loaded and notification via e-mail structure works successfully.

Post-conditions:

1. AnyChange System saves the notification configuration for each product that user selected and sends e-mail to the user according to the configuration successfully.

Data required:

1. Email address of the user, logged in to check notifications.

IMTSquare Company – AnyChange Project	
Test Cases	Date: 04/06/2023

Test Cases: UC-8: Search Products

Test Case 8: Search Products test

Description:

The objective of this test is to verify that the user can search products. Searching and browsing through the products via relevant filtering capability is the main scope of the test together with the main success scenario and extensions (see Use Cases and Use Case Model document).

Pre-conditions:

1. System should be available and the user must be logged in with the appropriate username and password.
2. Registered product list is loaded and the relevant connection between the software and the scraped platform is valid specifically for the product of interest.

Post-conditions:

1. System displays relevant filtering options (product name, seller, price and other constraints).
2. System presents the search results according to the entered filtering options.
3. Extension scenarios (system failure, exception handling for missing filtering information) are handled correctly.

Data required:

1. Relevant price and information for the products of interest, for checking the correct filtering is performed.

IMTSquare Company – AnyChange Project	
Test Cases	Date: 04/06/2023

Test Cases: UC-9: Manage Products

Test Case 9: Manage products test

Description:

The objective of this test is to verify that the user can manage products. Sellers' capability to manage products via create-retrieve-update-delete (CRUD) actions is the main scope of the test together with the main success scenario and extensions (see Use Cases and Use Case Model document).

Pre-conditions:

1. System should be available and the seller must be logged in with the appropriate username and password.
2. Seller's product list and adding new product screen is loaded sequentially.

Post-conditions:

1. System displays relevant new product fields (product name, brand, category, amount in inventory, other optional fields).
2. System updates the seller's product list once mandatory fields are filled.
3. Extension scenarios (system failure, product removal, product update, unique brand and product name) are handled correctly.

Data required:

1. Seller's mandatory product information (product name, brand, category, amount in inventory).

IMTSquare Company – AnyChange Project	
Test Cases	Date: 04/06/2023

Test Cases: UC-10: Request Support

Test Case 10: Request support test

Description:

The purpose of this test is to verify that users can request support in the system. Within the scope of this test, main success scenario and extension scenarios will be tested.

Pre-conditions:

1. System should be available and the seller must be logged in with the appropriate username and password.
2. User successfully logs in to the system and customer support page is loaded.

Post-conditions:

1. System saves the requests at the “waiting for review” status successfully.

Data required:

N/A

IMTSquare Company – AnyChange Project	
Test Cases	Date: 04/06/2023

Test Cases: UC-11: Manage Historical Data

Test Case 11: Manage historical data test

Description:

The purpose of this test is to verify that users can see the historical data for a selected product in the system. Within the scope of this test, main success scenario and extension scenarios will be tested.

Pre-conditions:

1. Premium User successfully logs in to the system and there are registered products in the system and time based product prices data is saved.

Post-conditions:

1. System filters the data and shows the result correctly.

Data required:

N/A

IMTSquare Company – AnyChange Project	
Test Cases	Date: 04/06/2023

Test Cases: UC-12: Manage Support Request

Test Case 11: Manage support request test

Description:

The purpose of this test is to verify that CSS users can manage support requests in the system. Within the scope of this test, main success scenario and extension scenarios will be tested.

Pre-conditions:

1. System should be available and the seller must be logged in with the appropriate username and password.
2. CSS successfully logs in to the system and customer support page is loaded.

Post-conditions:

1. System saves the answer and changes the status of the request and sends it to the user successfully.

Data required:

N/A

IMTSquare Company – AnyChange Project	
Test Cases	Date: 04/06/2023

Test Cases: UC-13: Manage Users

Test Case 11: Manage users test

Description:

The purpose of this test is to verify that admin can manage users in the system. Within the scope of this test, main success scenario and extension scenarios will be tested.

Pre-conditions:

1. System should be available and the seller must be logged in with the appropriate username and password.
2. There is at least one admin user in the system and admin user successfully logs in to the system.

Post-conditions:

1. System saves the operation and updates the user list and permissions successfully.

Data required:

N/A
